EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Syed Jafar Ali Reg. No. 58780 on 11/10/2009.

The application has been amended as follows:

31. (Currently Amended) A method, performed by a computer, of providing service analysis in service level management, comprising:

providing a service over a network having a plurality of network components that support the service, wherein performance of the service depends upon performances of the plurality of network components that support the service, and wherein the service has a state that represents the performance of the service;

measuring a plurality of component parameters for the plurality of network components that support the service across a plurality of domains of the network, wherein the plurality of component parameters measure performances of the plurality of network components that support the service;

determining the state of the service from the plurality of component parameters measured across the plurality of domains of the network, wherein determining the state of the service includes mapping the plurality of component parameters measured across the plurality of

Art Unit: 2443

domains of the network to a service parameter that represents the state of the service, and wherein the state of the service indicates whether the service conforms to an agreed upon service level identified in a service level agreement;

executing one or more data mining algorithms to discover a respective influence that a first one of the measured component parameters in a first domain of the plurality of domains of the network has on the service parameter;

executing the one or more data mining algorithms to discover a respective influence that a second one of the measured component parameters in a second domain of the plurality of domains of the network has on the service parameter;

identifying one of the first component parameter or the second component parameter that has a greatest influence on the service parameter based on the respective influences that the first component parameter and the second component parameter have on the service parameter; and

designating the identified component parameter to be the service parameter.

46. (Currently Amended) A device readable medium ~~storing~~ ~~holding~~ device executable instructions for executing a method of providing service analysis in service level management, the method comprising:

providing a service over a network having a plurality of network components that support the service, wherein performance of the service depends upon performances of the plurality of network components that support the service, and wherein the service has a state that represents the performance of the service;

Art Unit: 2443

measuring a plurality of component parameters for the plurality of network components that support the service across a plurality of domains of the network, wherein the plurality of component parameters measure performances of the plurality of network components that support the service;

determining the state of the service from the plurality of component parameters measured across the plurality of domains of the network, wherein determining the state of the service includes mapping the plurality of component parameters measured across the plurality of domains of the network to a service parameter that represents the state of the service, and wherein the state of the service indicates whether the service conforms to an agreed upon service level identified in a service level agreement;

executing one or more data mining algorithms to discover a respective influence that a first one of the measured component parameters in a first domain of the plurality of domains of the network has on the service parameter;

executing the one or more data mining algorithms to discover a respective influence that a second one of the measured component parameters in a second domain of the plurality of domains of the network has on the service parameter;

identifying one of the first component parameter or the second component parameter that has a greatest influence on the service parameter based on the respective influences that the first component parameter and the second component parameter have on the service parameter; and

designating the identified component parameter to be the service parameter.

Art Unit: 2443

The following is an examiner's statement of reasons for allowance: (Glitho et al. 6233449 and Hunter et al. 6449603), does not teach nor suggest in detail, a method, performed by a computer, of providing service analysis in service level management, comprising: providing a service over a network having a plurality of network components that support the service, wherein performance of the service depends upon performances of the plurality of network components that support the service, and wherein the service has a state that represents the performance of the service; measuring a plurality of component parameters for the plurality of network components that support the service across a plurality of domains of the network, wherein the plurality of component parameters measure performances of the plurality of network components that support the service; determining the state of the service from the plurality of component parameters measured across the plurality of domains of the network, wherein determining the state of the service includes mapping the plurality of component parameters measured across the plurality of domains of the network to a service parameter that represents the state of the service, and wherein the state of the service indicates whether the service conforms to an agreed upon service level identified in a service level agreement; executing one or more data mining algorithms to discover a respective influence that a first one of the measured component parameters in a first domain of the plurality of domains of the network has on the service parameter; executing the one or more data mining algorithms to discover a respective influence that a second one of the measured component parameters in a second domain of the plurality of domains of the network has on the service parameter; identifying one of the first component parameter or the second component parameter that has a greatest influence on the service parameter based on the respective influences that the first component parameter and the second

Art Unit: 2443

component parameter have on the service parameter; and designating the identified component parameter to be the service parameter, as argued by the Applicant (see Specification as of 09/26/2000, pages 28, 40-44, 47 – 57, 60 - 81; and Drawings dated 05/23/2000, Figures 10 – 20 and 27 – 34 of Applicant’s enabling portions of the specification and drawings)..

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled “Comments on Statement of Reasons for Allowance.”
